📍 Pattukkottai - 614601, Thanjavur
(DT), India.

📅 2002-04-17

Education Summary

MTECH(IT)

College of Engineering Guindy (CEG),
Chennai

2023 – 2025

8.2

BE (ECE)

K. Ramakrishnan college of
Engineering (Autonomous), Trichy

2019 – 2023

8.45

HSC

Laurel Higher Secondary School,
Pattukkottai.

2019

62%

SSLC

Laurel Higher Secondary School,
Pattkkuottai.

2017

92.6%

Technical Skills

- Proficient in REACTJS, Python, HTML, CSS, Java Script, NodeJS, SQL & MongoDB.
- Having Good Knowledge in MS-Office

Achievements & Awards

Shortlisted for the final round of "Smart Indian Hackathon-2022" for my project of "Municipal Finances and Tax Management System "

Completed the TALENTNEXT course on JAVA J2EE

Digital skill readiness program course completion certificate from Wipro

Career Objective

To secure a challenging position in a reputable organization where I can expand my knowledge and skills, while utilizing my training and abilities to contribute effectively to the growth and success of the company.

Organisations

Finforz Technologies Pvt. Ltd.

Associate Software Engineer

06/2025 – Present | Chennai

- Designed UI/UX prototypes in Figma based on client requirements and developed responsive user interfaces using the Angular framework.
- Built reusable custom components using Angular libraries and converted design prototypes into production-ready frontend code, improving UI performance, usability, and maintainability.

Internship Experience

Finforz Technologies Pvt. Ltd.

Intern

01/2025 – 05/2025

- Developed a multi-task deep learning model using a shared encoder architecture combining Bi-LSTM and CNN to perform revenue prediction, payment classification, and anomaly detection in a unified framework.
- Applied random hyperparameter tuning to optimize model performance and gained hands-on experience in the AI/ML development lifecycle including model design, training, and evaluation.

Project Summary

WORKOUT TUTORIAL BY USING MERN STACK

- Developed a full-stack fitness web application using MongoDB, Express.js, React.js, and Node.js to provide workout tutorials and guidance.

SPAM DETECTION BY USING MACHINE LEARNING

- Developed a machine learning model to classify messages as spam or non-spam using text preprocessing and classification techniques.

FRUIT CLASSIFICATION BY USING DEEP LEARNING

- Implemented a CNN-based deep learning model to classify fruits from image data with improved prediction accuracy.

SMART GREENHOUSE FARMING: AN IOT-BASED AUTOMATIC IRRIGATION AND FERTILIZATION SYSTEM

- Designed an IoT-based smart agriculture system using Raspberry Pi and sensors.

Declaration

I hereby declare that all the above information is true to the best of my knowledge

- Implemented automated irrigation and fertilization based on soil moisture and pH monitoring.

AI-Powered Smart Parking Application

- Developed a full-stack smart parking management application with AI-assisted development, implementing parking slot tracking, booking management, and real-time parking availability.
